CERTIFICATIONS

ISSA Certificate of Completion
ISSA Middle Tn Chapter | 09/22/25 - 09/23/25

Security +
Expected Jan 2026

Full Stack Web Developer
Vanderbilt University | 2024

ISC2 Cert: Security Principles

EDUCATION

Certificate in Applied Science in Cybersecurity
Denmark Technical College | 2025-2026

Full Stack Web Developer
Vanderbilt University | 2020-2021

Bachelor of Science & Communications
Tennessee Technological University | 2012–2017

PROFESSIONAL SUMMARY

Aspiring Cybersecurity Professional with hands-on experience in threat analysis and incident response protocols, leveraging a solid foundation in software development and product analysis. Experienced in responsive web design, API testing, CMS platforms, and product analysis, with a growing focus on risk management, threat detection, and information security. Skilled in Agile and Waterfall workflows, debugging, and cross-functional collaboration. Currently completing the Fusion Cyber RMF Cybersecurity AI Program, gaining hands-on experience with cybersecurity frameworks, compliance standards, and AI-driven threat analysis. Prepared to apply diverse security knowledge and grow expertise in a dynamic setting.

EXPERIENCE

Product Analyst
2024 - PRESENT

HCA Healthcare

- Optimizing the security and performance of digital tools used for patient engagement, ensuring high availability and trust.
- Applying analytical techniques to evaluate user behavior and system performance to inform product development, demonstrating capability in data-driven risk assessment.
- Collaborated cross-functionally with development, QA, and security teams to implement controls and improve the digital patient journey along with key stakeholders.

Training & Support Specialist / Developer
2017 - 2024

Vanderbilt University

- Responsible for assisting and completing help desk tasks for Web Communications at Vanderbilt University.
- Helped monitor and post content onto various Vanderbilt University webpages.
- Provided key assistance in technical operations and cyber risk management, analyzing sites for suspicious activity.

PROJECTS

- **Nashwood Inc**
- **Onward & Upward**
- **Omarion Worldwide**

Web Developer

Omarion Worldwide

https://omarionworldwide.netlify.app/

- **Infrastructure & DNS Security:** Assisted in the administration and monitoring of critical internet-facing infrastructure, including Domain Name System (DNS) configurations, to ensure domain integrity and mitigate risks such as DNS spoofing or unauthorized zone transfers.
- **Web Operations & Perimeter Defense:** Supported the maintenance and optimization of front-facing web systems, ensuring high availability, optimal performance, and continuous monitoring of web traffic for anomalies.
- **Network Performance & Resiliency:** Collaborated on network performance tuning and traffic analysis to enhance system uptime, reduce latency, and strengthen digital perimeter resiliency against service disruptions.
- **Technical Asset Management:** Served as a key operational asset by aligning technical system maintenance with operational best practices, ensuring secure configuration baselines for core enterprise web systems.

EXTRA ACTIVITIES & CYBER RANGE LAB SKILLS

Virtual Lab Environment & Technical Skills

Gaining hands-on experience in cybersecurity through comprehensive lab exercises including: Network penetration testing and vulnerability assessment, Incident response and digital forensics, Security tool configuration and monitoring, Threat hunting and malware analysis, Compliance frameworks and risk assessment, Splunk Labs, and Linux Lab.

Applied Security Operations Skills

Gaining practical experience in log analysis and event triage using Splunk Labs, focusing on detecting suspicious activity and escalating events based on criticality.

Security Tool Proficiency

Gaining practical experience in Splunk Labs and Linux environments for log analysis, security tool configuration, and continuous monitoring to detect malicious activity.

Incident Response Execution

Performing Tier 1 and Tier 2 analysis and response in real-world scenarios, executing the full Incident Response process from initial alert to post-incident review, including digital forensics.

Remediation Guidance

Developing skills in identifying root causes of events and formulating clear, actionable recommendations on how to mitigate threats and providing guidance for proper remediation.

Comprehensive Security & AI Lab Training

Gaining hands-on experience in cybersecurity through comprehensive lab training exercises including: Network penetration testing and vulnerability assessment, Cloud Security (AWS/Azure security best practices, compliance frameworks, cloud architecture security, hybrid cloud protection), Defense Strategies (advanced threat detection, SOC management, incident response protocols), and AI Integration (machine learning applications in cybersecurity, automated threat detection, AI-driven security analytics). Includes practical labs, real-world scenarios, and industry-standard certification preparation.
